

EX
1

1. Calculer l'aire du triangle CDE.

2. Calculer l'aire du triangle GHI.

3. Calculer l'aire du triangle KLM.

4. Calculer l'aire du triangle OPQ.

5. Calculer l'aire du triangle STU .

6. Calculer l'aire du triangle CDE .

EX

1

$$\mathcal{A}_{CDE} = \frac{1}{2} \times CD \times FE = \frac{1}{2} \times 9 \text{ cm} \times 6 \text{ cm} = 27 \text{ cm}^2$$

$$\mathcal{A}_{GHI} = \frac{1}{2} \times GH \times IJ = \frac{1}{2} \times 8 \text{ cm} \times 5 \text{ cm} = 20 \text{ cm}^2$$

$$\mathcal{A}_{KLM} = \frac{1}{2} \times KL \times NM = \frac{1}{2} \times 7 \text{ cm} \times 4 \text{ cm} = 14 \text{ cm}^2$$

$$\mathcal{A}_{OPQ} = \frac{1}{2} \times OP \times RQ = \frac{1}{2} \times 6 \text{ cm} \times 3 \text{ cm} = 9 \text{ cm}^2$$

5.

$$\mathcal{A}_{STU} = \frac{1}{2} \times ST \times VU = \frac{1}{2} \times 5 \text{ cm} \times 6 \text{ cm} = 15 \text{ cm}^2$$

6.

$$\mathcal{A}_{CDE} = \frac{1}{2} \times CD \times FE = \frac{1}{2} \times 9 \text{ cm} \times 5 \text{ cm} = 22,5 \text{ cm}^2$$
