

EX
1

Compléter les égalités.

1. $9 = \frac{\quad}{\quad} = \frac{\quad}{5}$

2. $\frac{1}{9} = \frac{\quad}{\quad} = \frac{2}{\quad}$

3. $\frac{3}{8} = \frac{\quad}{\quad} = \frac{\quad}{24}$

4. $\frac{4}{5} = \frac{\quad}{\quad} = \frac{32}{\quad}$

5. $\frac{5}{7} = \frac{\quad}{\quad} = \frac{\quad}{21}$

6. $\frac{1}{4} = \frac{\quad}{\quad} = \frac{8}{\quad}$

7. $\frac{2}{5} = \frac{\quad}{\quad} = \frac{\quad}{40}$

8. $\frac{2}{9} = \frac{\quad}{\quad} = \frac{4}{\quad}$

9. $\frac{1}{3} = \frac{\quad}{\quad} = \frac{\quad}{6}$

10. $8 = \frac{\quad}{\quad} = \frac{72}{\quad}$

11. $5 = \frac{\quad}{\quad} = \frac{\quad}{8}$

12. $\frac{3}{7} = \frac{\quad}{\quad} = \frac{18}{\quad}$

EX
2

Trouver la sortie en ne passant que par les cases contenant des fractions égales à $\frac{5}{8}$.

EX

1

$$1. 9 = \frac{9}{1} = \frac{9 \times 5}{1 \times 5} = \frac{45}{5}$$

$$2. \frac{1}{9} = \frac{1 \times 2}{9 \times 2} = \frac{2}{18}$$

$$3. \frac{3}{8} = \frac{3 \times 3}{8 \times 3} = \frac{9}{24}$$

$$4. \frac{4}{5} = \frac{4 \times 8}{5 \times 8} = \frac{32}{40}$$

$$5. \frac{5}{7} = \frac{5 \times 3}{7 \times 3} = \frac{15}{21}$$

$$6. \frac{1}{4} = \frac{1 \times 8}{4 \times 8} = \frac{8}{32}$$

$$7. \frac{2}{5} = \frac{2 \times 8}{5 \times 8} = \frac{16}{40}$$

$$8. \frac{2}{9} = \frac{2 \times 2}{9 \times 2} = \frac{4}{18}$$

$$9. \frac{1}{3} = \frac{1 \times 2}{3 \times 2} = \frac{2}{6}$$

$$10. 8 = \frac{8}{1} = \frac{8 \times 9}{1 \times 9} = \frac{72}{9}$$

$$11. 5 = \frac{5}{1} = \frac{5 \times 8}{1 \times 8} = \frac{40}{8}$$

$$12. \frac{3}{7} = \frac{3 \times 6}{7 \times 6} = \frac{18}{42}$$

EX

2

1. Voici le chemin en couleur et la sortie était le numéro 1.
