

EX  
1

Simplifier les fractions suivantes au maximum.

1.  $\frac{18}{60} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

2.  $\frac{3}{27} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

3.  $\frac{7}{56} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

4.  $\frac{4}{20} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

5.  $\frac{20}{90} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

6.  $\frac{36}{40} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

7.  $\frac{80}{90} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

8.  $\frac{15}{24} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

9.  $\frac{20}{35} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

10.  $\frac{9}{24} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

11.  $\frac{10}{100} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

12.  $\frac{5}{30} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

EX

1

$$1. \frac{18}{60} = \frac{6 \times 3}{6 \times 10} = \frac{3}{10}$$

$$2. \frac{3}{27} = \frac{3 \times 1}{3 \times 9} = \frac{1}{9}$$

$$3. \frac{7}{56} = \frac{7 \times 1}{7 \times 8} = \frac{1}{8}$$

$$4. \frac{4}{20} = \frac{4 \times 1}{4 \times 5} = \frac{1}{5}$$

$$5. \frac{20}{90} = \frac{10 \times 2}{10 \times 9} = \frac{2}{9}$$

$$6. \frac{36}{40} = \frac{4 \times 9}{4 \times 10} = \frac{9}{10}$$

$$7. \frac{80}{90} = \frac{10 \times 8}{10 \times 9} = \frac{8}{9}$$

$$8. \frac{15}{24} = \frac{3 \times 5}{3 \times 8} = \frac{5}{8}$$

$$9. \frac{20}{35} = \frac{5 \times 4}{5 \times 7} = \frac{4}{7}$$

$$10. \frac{9}{24} = \frac{3 \times 3}{3 \times 8} = \frac{3}{8}$$

$$11. \frac{10}{100} = \frac{10 \times 1}{10 \times 10} = \frac{1}{10}$$

$$12. \frac{5}{30} = \frac{5 \times 1}{5 \times 6} = \frac{1}{6}$$
